Now imagine if your students and faculty had access to everything—no paywalls, no “access denied” flags. Imagine being able to confidently demonstrate your library’s value because now your metrics are tied to the research goals of the university, instead of looking for usage patterns to determine where to invest your dollars next year. Imagine being able to predict pricing and never having to cancel or swap a title ever again in order to make the numbers work.

This is the Database Model.

</table>

Supporting Your Library’s Objectives

- Increase access to content for all researchers and students and improve patrons’ library experience—no paywalls, no access denieds.
- Invest in a model that will deliver on institutional goals, driving readership, citations and authorship.
- Deliver predictable costs through a single fee with a set price cap increase.
- Save time and resources through streamlined, expedited renewals: no reconciliations, cancellations or swaps.

“No more annual reconciliations. That’s a huge saving of man hours.”

-Kim Armstrong, Deputy Director of The Center for Leverages, CIC
The Database Model in Practice

In an effort to ground the Database Model in your needs as a librarian, we conducted several pilots with academic consortia and their member institutions. One such consortium headquartered in the Midwest, the Committee on Institutional Cooperation (CIC), signed on to the Database Model for a two-year pilot.

Pre-Pilot Concerns

Before piloting the Database Model, the CIC expressed dissatisfaction with the current pricing model, inconsistent price caps across member institutions, the title reconciliation process, managing subscriptions and title-by-title purchases.

A Model That Delivered

Once signed on to the Database Model, the CIC’s previous concerns were eliminated:

- Members of the CIC were unanimously surprised by the simplicity of the Database Model process, the ease of renewing with a single invoice, and uptick in usage at their institutions.
- All members now have the same access and are on the same playing field, even the smaller sister schools.
- Members see direct ROI on CIC membership.
- Price and content became predictable.
- Significant reduction in access denied cases.

The CIC will continue with Database Model and will not go back to their previous model.

"Rather than grappling with turn-aways, rather than grappling with what new subscriptions should we add every year, rather than doing that school by school, we were able to really present a full package that brought everybody together, everybody had the same access."

-Kim Armstrong, Deputy Director of The Center for Leverages, CIC

Important to Note

Discounted Print

Deep Discounted Print (DDP) is available via agents at 20% of the institutional print price for any journals that still offer print (whether previously subscribed or not). DDP pricing may be adjusted annually.

Current Exceptions

Consistent with current licenses, Econometrica Society journals will remain available on a Title-by-Title subscription base only, and therefore are not included in the database. This includes:

- Econometrica
- Journal of the European Economic Association
