This report covers CAM’s activities November 2018 through February 2019.

At the January meeting, CAM members discussed FALSC’s response to the Proposal Regarding Optional eResources Cataloging, Batchloading, and Related Acquisitions Options. FALSC is unable to design and implement the suggested changes but is willing to work with all of us to address some of the issues that have been raised. We will continue to collaborate with TSSC and FALSC staff to implement solutions to the challenges presented by the shared bibliographic database for e-Resources records and determine what actions can be taken to improve the process. This is especially important as we begin the process of moving to a new library services platform. In addition, FALSC staff will be taking the following steps to address some of the issues raised in the proposal:

- Develop enhanced processes to address the speed and turnaround of approving Genload profiles and data loads to get purchased resources available to library users as quickly as possible.
- Collect statistical data to inform future discussions on existing data integrity problems, potential risks of libraries inadvertently and incorrectly overlaying others’ records, and delays in approving Genload profiles and setting up new data loads.

CAM appreciates FALSC staff taking the time to address the proposal and for providing recommendations on how to go about addressing the issues that were raised.

A separate meeting was held with those who were interested from FSU, UF, UNF and USF, to discuss what we are all doing to get collection data out of Aleph for the ACRL/IPEDS survey. After much discussion, we determined that two new Arrow reports, for bib title count and volume count, would be useful to get some of the data we need but also to be able run as needed throughout the year. A request has been made to FALSC to create these reports. It will take them some time to do as the staff person who worked most closely with Arrow has retired and training for current staff is just getting started.

**CAM Subcommittees:**

The Bibliographic Control and Discovery Subcommittee (BCDS) of CAM reported that Mark Lopez at FSU will co-chair the subcommittee with David Van Kleeck at UF in 2019. Elaine Dong at FIU will continue the updating/editing work on the Shared Bib/Cataloging Wiki site ([https://sharedbib.pubwiki.fcla.edu/wiki/index.php/Cataloging](https://sharedbib.pubwiki.fcla.edu/wiki/index.php/Cataloging)). In addition, the subcommittee finalized the remaining updates and completed the transfer of the maintenance of the State University System of Florida Libraries Guidelines and Procedures for the Shared Bibliographic Catalog to TSSC and will help TSSC with its maintenance as needed. The Shared Bib Guidelines now reside on the TSSC LibGuide at: [https://falsc.libguides.com/c.php?g=845752&p=6075096](https://falsc.libguides.com/c.php?g=845752&p=6075096). The subcommittee is looking forward to the anticipated preparation for migration to a new ILS in the coming year and will coordinate with CAM, TSSC, and others to support statewide efforts for the migration.
The Authorities Subcommittee of CAM reported that FIU is continuing to clean up series authority records. Zhonghua and Gerald sent an e-mail at the beginning of January to the CAM listserv that listed possible training topics related to access points (headings) in Aleph or OCLC. After receiving feedback, Zhonghua and Gerald are planning online training sessions.

2019 CAM Chair:

Jennifer Murray, Director of Technical Services and Library Systems at University of North Florida, will continue as CAM chair for 2019.

Respectfully submitted,
Jennifer Murray, CAM Chair
